of deployment and administration, Novell Linux Small Business Suite provides proven, reliable networking services and manageable licensing as well as integrated installation and configuration wizards. Novell Linux Small Business Suite saves in excess of 50 percent in software costs alone compared to a Microsoft alternative. Based on industry-leading SUSE LINUX, Novell Linux Small Business Suite also outperforms other Linux offerings in terms of quality, performance, stability, recovery and interoperability.

UNPARALLELED RELIABILITY AND SECURITY

Linux servers can run for several years without going down. They do not require shutdown or reboot to load or unload new applications and services. With its firewall, virtual private network and secure collaboration, Novell Linux Small Business Suite helps provide even greater protection from the destructive viruses and security vulnerabilities to which other operating systems are frequently susceptible. The result? Security second to none.

SYSTEMWIDE PRODUCTIVITY

Novell Linux Small Business Suite is the only small-business offering to provide a complete solution—from the server to the desktop. In addition to an end-user operating system based on SUSE LINUX Enterprise Server 9, it incorporates the Novell Linux Desktop, which includes office productivity and Internet tools. The Novell Edition of OpenOffice.org

provides a word processor, spreadsheet and presentation suite compatible with Microsoft® Office file formats. Mozilla® Firefox is a fast, full-featured browser that adheres to Internet standards and features innovations such as tabbed browsing and pop-up blocking.

FREEDOM TO CHOOSE

Novell Linux Small Business Suite lets you choose your hardware, software and desktop operating systems—all without vendor lock-in or large licensing and auditing commitments. Numerous popular line-of-business applications either run on Linux directly or interoperate with a Linux server in a client/server environment. If you choose, you may leverage your existing Windows desktop clients and pace your company's Linux adoption by deploying Linux at the server level first.
